

CANCER FUNDRAISER WEBSITE

Abstract

Cancer is a serious disease that affects millions of people worldwide. Many patients struggle to pay for their treatment, which can be very expensive. This project aims to create an online Cancer Fundraising Website to help patients raise money for their medical expenses.

The website will allow users to start fundraising campaigns where friends, family, and kind-hearted people can donate money. It will have a secure payment system, user login for privacy, and an admin panel to manage donations. The website will also show real-time donation updates, allow sharing on social media, and provide receipts for donors.

Apart from collecting donations, the website will also spread awareness about cancer by sharing important information on early detection and treatment.

This platform will be a safe, easy-to-use, and effective way to help cancer patients get financial support. It will connect those in need with people who want to help, making a real difference in their lives.

Chapter 1

Introduction

1.1 Overview

1.2 Objective

1.3 Aim

1.4 Organization of Report

1.1 Overview

The **Cancer Fundraising Website** is an online platform designed to help cancer patients, NGOs, and organizations raise funds for treatment and research. The platform ensures a secure and user-friendly experience for donors while allowing campaign creators to manage their fundraising efforts efficiently.

Key Aspects of the Project:

1. Objective:

- To provide financial assistance to cancer patients through online fundraising campaigns.
- To create a transparent and secure donation system for individuals and organizations.

2. Features:

- **User Registration & Login** – Users can create accounts to donate.
- **Secure Payment System** – Integrated payment gateways like PayPal.
- **Donation Tracking** – Real-time updates on donation progress and milestones.

3. Technology Stack:

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Node.js, Express.js
- **Database:** MySQL.

1.2 Aim:

This project aims to design and develop an **online Cancer Fundraising Website** that enables individuals and organizations to raise funds for cancer patients. The platform will provide a secure and user-friendly interface for donors to contribute, manage fundraising campaigns, and spread awareness. The system will integrate payment gateways, user authentication, and an admin dashboard for effective management of donations and campaigns.

1.3 Objective

- **Raise Money for Cancer Treatment** – Collect donations to help patients and support research.
- **Spread Awareness** – Share information about cancer, prevention, and early detection.
- **Be Transparent** – Show how donations are used and share success stories.
- **Make Fundraising Easy** – Offer simple and secure ways to donate or start fundraisers

1.4 Organization of Report

- **Introduction:** Cancer remains one of the leading health challenges worldwide, affecting millions of lives each year. The high cost of treatment and medical care often becomes a financial burden for patients and their families. In response to this need, the Cancer Fundraising Website aims to bridge the gap by providing an accessible and efficient way for donors to contribute to cancer-related causes. The platform not only facilitates monetary contributions but also spreads awareness and builds a supportive community for those affected by cancer. With an emphasis on transparency and impact, the website fosters trust and encourages long-term donor engagement.
- **Methodology:** The development of the Cancer Fundraising Website follows a structured approach to ensure efficiency, security, and user engagement:
 1. **Website Development & Design:** The platform is built using modern web development technologies, ensuring a responsive design. Key features include donation tracking.
 2. **User Registration:** Users can sign up and create fundraising campaigns, detailing their needs and sharing their stories to connect with potential donors.
 3. **Secure Payment Integration:** The website incorporates secure payment gateways to facilitate safe payments via digital wallets and bank transfers.
 4. **Transparency:** Regular updates and financial reports are provided to donors, ensuring transparency
 5. **Community Engagement:** The website includes discussion forums and support groups where patients, families, and donors can connect, share experiences.

Chapter 2

Literature Survey

2.1 Table 1: Difference between our cancer fundraiser platform and other donation platforms

Company Name	Allows Cancer Fundraising	Support Accommodation	Peer-to-Peer Fundraising	Take Platform Fees	Global Availability
GoFundMe	Yes	Yes	Yes	No	Yes
Ketto	Yes	Yes	Yes	Yes	Yes
Charity: Water	No	No	No	No	Limited
Giveth	Yes	No	Yes	No	Yes
Co Copay	Yes	Yes	Yes	Not specified	Yes

2.2 In-depth Analysis:

- Recent studies show that cancer-specific crowdfunding has become an essential supplement to cover the high costs of oncology care, although most campaigns still underachieve their goals; meanwhile, there is virtually no research on embedding accommodation or travel-cost modules directly into medical fundraising platforms, representing a clear design gap.
- Peer-to-peer fundraising remains central to campaign virality and donor engagement, even though rigorous trials report only modest psychosocial benefits for beneficiaries and methodological inconsistencies across studies.
- Research on platform fees confirms that donors exhibit “overhead aversion,” reacting negatively to high fees and favouring zero-fee models that correlate with larger average gifts. Global availability remains uneven—many platforms are region-locked by

payment rails and regulations, highlighting the need for stronger cross-border collaboration to ensure equitable access.

- Corporate-to-NGO digital CSR initiatives are emerging, but scholarly analysis of these workflows, transparency practices, and impact measurement is scarce. Together, these insights point to strategic opportunities for a differentiated platform: integrate into-platform lodging search and booking, formalize corporate pledge management, experiment with fee-model transparency, and advocate for global equity in medical crowdfunding.

2.3 Project Planning:

- The project will start with a planning phase where we will gather the basic requirements and understand the main objectives of the platform.
- This will be followed by analyzing the important features like checking treatment availability in hospitals, finding nearby accommodations for patients, enabling donations for patients and NGOs, and allowing corporate financial funding.
- Once the requirements are clear, we will design the basic structure of the website, including database design and user interface layouts. After that, the development phase will begin, where all core features will be implemented, like the login system, treatment search, accommodation finder, donation portal, and admin panel. Proper testing of all features will be done to ensure the smooth working of the system.
- In the final phase, the project will be deployed and made ready for use, along with basic documentation and user guidance. Maintenance and improvements will be done based on user feedback if required.

Chapter 3

Problem Statement

3.1 Why did we select this problem statement?

A Cancer fundraising website development project aims to create a platform that allows individuals and organizations to raise funds for charitable causes and events. The site features an easy-to-use interface that allows users to create and customize fundraising pages, set fundraising goals, and securely accept donations online. The goal of this project is to develop a fundraising website for a non-profit organization. This website serves as a platform for organizations to raise funds for various programs and initiatives.

-Who does the problem affect?

- **Cancer Patients** – Individuals undergoing treatment who struggle with the financial burden of medical expenses, surgery, and medications.
- **Families & Caregivers** – Loved ones supporting cancer patients, and financial strain.
- **Healthcare Providers & Hospitals** – Institutions that need funding to offer better treatment options and support services.
- **Donors & Philanthropists** – Individuals and organizations looking for transparent, reliable ways to contribute to cancer-related causes.

-What - What are the boundaries of the problem, e.g., organizational, workflow, geographic, customer, segments, etc. –

-Boundaries of the Problem

- **Organizational** – Many nonprofit organizations and hospitals struggle with limited resources to support cancer patients effectively.
- **Workflow** – Traditional fundraising methods are often slow, inefficient, and fail to reach a broad audience.
- **Customer Segments** – The problem impacts cancer patients, caregivers, donors, researchers, and nonprofit organizations.

-The Issue

- The high cost of cancer treatment creates financial barriers for patients, making it difficult for them to afford necessary care.

- Lack of an efficient, transparent, and widely accessible fundraising platform limits the ability of individuals and organizations to raise funds effectively.

-Why is it important that we fix the problem?

- What impact does it have on the business or customer?
- What impact does it have on all stakeholders, e.g., employees, suppliers, customers, shareholders, etc.
- Cancer is one of the leading causes of death worldwide, and financial constraints often prevent patients from accessing life-saving treatments.
- Without an efficient fundraising platform, many patients and their families struggle to cover medical expenses, worsening their quality of life.
- A well-structured fundraising website can streamline donations, enhance transparency, and increase contributions, ensuring patients receive timely assistance

3.2 Table 2: Goals and Objectives

Sr No	Functionality	Goals	Objectives
1.	User Registration	Onboard patients, donors & corporates	Create user accounts Enable role-based access (patient, donor, corporate, admin)
2.	User Login	Secure access to the system	Authenticate users Protect sensitive health & financial data.
3.	Treatment Availability Check	Let patients verify if a treatment is available at a hospital	Real-time lookup of hospital treatment offerings Display availability status and wait times
4.	Accommodation Search	Help patients find lodging near their hospital	List nearby accommodations Filter by distance, price, and amenities
5.	Donate to NGOs & Patients	Allow donations to both individual patients and NGOs	Process one-time or recurring gifts Track donor & recipient records. Ensure transparent use
6.	Corporate Financial Funding	Enable corporations to fund NGOs directly	Manage corporate pledge Allocate funds to NGO accounts Generate acknowledgement receipts

Software Requirements Specification

4.1 Hardware Requirements:

- **Web Server:** High-performance cloud-based or dedicated server to handle website traffic
- **Database Type:** MySQL.
- Backup & Security Hardware

4.2 Software Requirements:

➤ Operating System & Server Software

- **Web Server OS:** Ubuntu Server, or Windows Server
- **Database Server:** MySQL.

➤ Development Tools & Frameworks

- **Front-End Development:** HTML, CSS, JavaScript.
- **Back-End Development:** Node.js, Express.js

Chapter 6

Conclusion and Future Scope

-Conclusion:

The Cancer Fundraising Website project provides a powerful platform to support cancer research and patient care through secure and user-friendly fundraising campaigns. By allowing individuals to create personal or team campaigns, donate securely, and track progress, the website fosters a community of support and awareness.

Features like social media integration, event participation, and real-time updates ensure broader engagement and impact. Overall, this platform will make a meaningful contribution to the fight against cancer by empowering people to make a difference through fundraising and shared efforts.

-Future Scope:

Global Expansion & Multi-Currency Support

- Expand the platform to support multiple currencies for international donors.
- Implement automatic currency conversion for seamless transactions.

Integration with Medical Institutions

- Partner with hospitals and NGOs to streamline fund distribution directly to patient accounts.
- Allow hospitals to verify patient conditions for authenticity.

Mobile App Development

- Create a mobile application for easier access and real-time donation tracking.
- Provide push notifications for urgent fundraising campaigns.

Augmented Reality (AR) for Awareness Campaigns

- Develop AR experiences to showcase survivor stories and medical advancements.
- Use AR filters to engage users in social media-driven donation challenges.

Automated Fund Allocation System

- Introduce a smart fund distribution system to prioritize critical cases.
- Allow donors to specify how their donations should be utilized.
